Resources for the RIPE NCC

Ripe 58
Remco van Mook
Equinix

What does it do?

- It describes how the RIPE NCC can get resources allocated/assigned to itself
- Fixes a hole in current policy
- Ensures an open and transparent process

A hole???

- Current policy requires a (direct or indirect) contract between resource holders and the RIPE NCC
- ..
- This is problematic for a resource holder called RIPE NCC

How does it work

- NCC requests
- ~~Hostmasters~~ IPRAs write an opinion
- Opinion is evaluated by members of the Pool of Arbiters
- Opinion and evaluation are published
- Resources granted (or not)

Arguments Supporting

- No current standard
- Contractual requirement hole
- Every resource assigned to NCC is a conflict of interest -> Pool of Arbiters
- Open!
- Transparent!

Arguments against

- Click to add text
