

Autotrust

Matthijs Mekking
NLnet Labs

Overview

- What is this?
- History
- Usage
- Issues

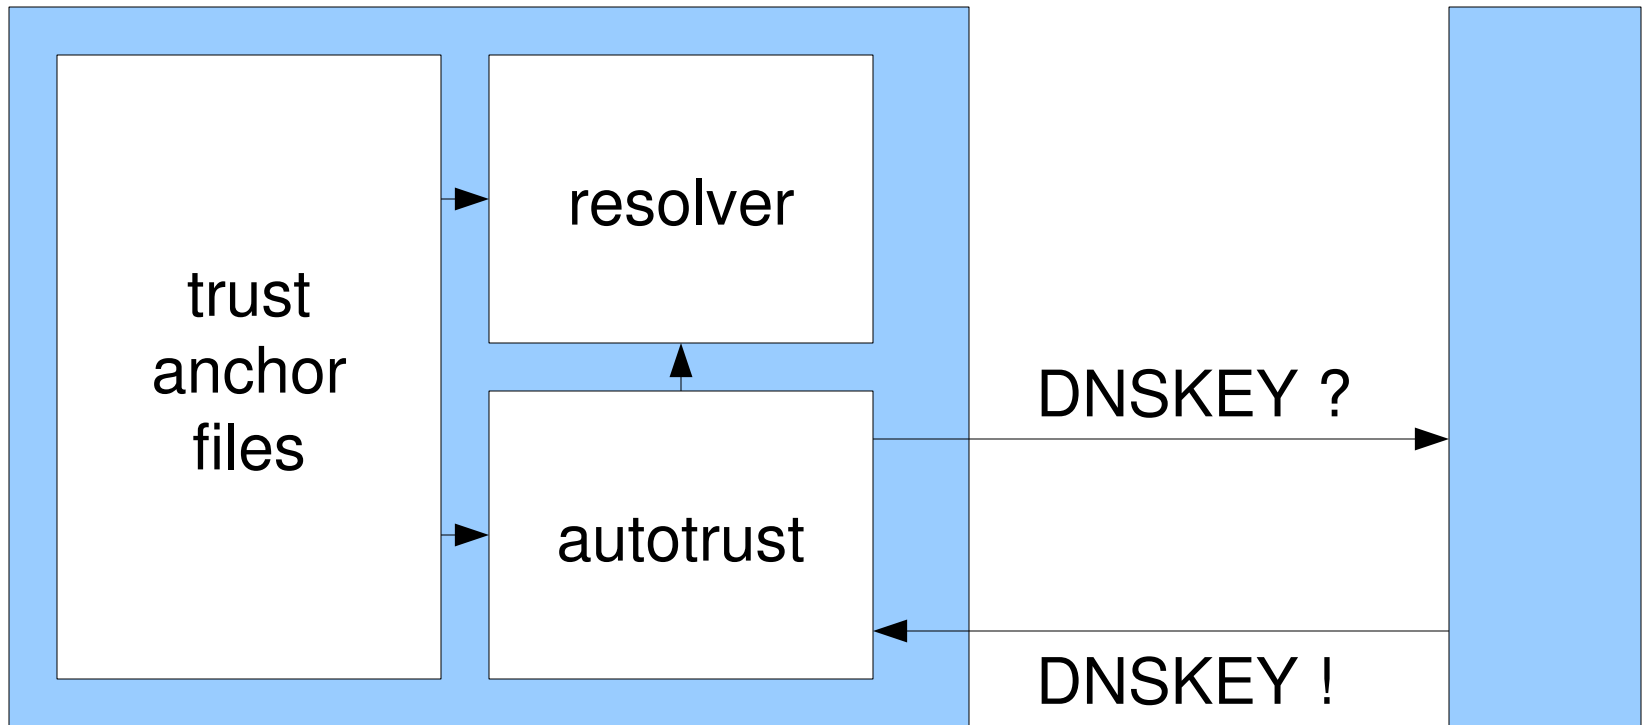

Autotrust is...

- A tool to automatically maintain your trust anchors
- An alternative to trustman and update_anchor.sh
- RFC 5011-compliant
- Resolver-independent
- Highly configurable
- Making use of LDNS and libunbound

History

- Started out as a simple command-line aiding tool (v0.1.0)
- Wide range of options added since.
 - Signal resolver(s)
 - Works with REVOKED bit not set
 - Accurate active refresh timers
 - ...
- v0.3.1 coming up

Usage

Issues

- Not a trust anchor fetcher
- No trust point deletion
- No holidays allowed
- Minor TODO list
